“Media Flayer”

Project Management Plan

Nov, 2024

Overview

This is the Project Management Plan for the Media Flayer OSINT application project. Its aim is to establish guidelines for group members contributing to the project.

Goals

1. **Establish Group Procedures**
2. **Document Communication Methods**

Communication Strategies

In order to foster group communication these strategies will be employed.

1. Weekly team meetings to review progress and discuss next steps for the project.
2. Utilize a team discord server to communicate immediate updates.
3. Maintain a GitHub Repository for sharing resources

Collaboration Tools

1. GitHub

GitHub is a code repository which enables collaborative development on projects. We will use it to keep track of project code and documentation and enable easy contributions from all group members.

2. Discord

Discord is a messaging and communication platform that enables users to create virtual communities for communications. A private server will be utilized to host project communications.

Workflow Guidelines

In order to effectively work on the project these workflow guidelines should be followed.

- Conduct regular code reviews to ensure quality and adherence to standards.
- Assign clear ownership for each task with defined deadlines.
- Utilize continuous integration and deployment (CI/CD) pipelines for efficient testing and deployment.
